Multilizer 2007 Lite Localization Tools

Multilizer 2007 Lite for Developers and **Multilizer 2007 Lite for Documents** offer an easy way to localize software and content. Multilizer takes care of the support for different file formats, and allows the user to focus on translation work.

Outstanding ease of use at an affordable price makes **Multilizer 2007 Lite for Developers** and **Multilizer 2007 Lite for Documents** the most suitable choice for smaller **software and document localizing** projects.

Both products are aimed to small and medium size companies and clients, who wants to localize either their software or documents. It enables the localization from one native language to several languages simultaneously. Multilizer understands all character sets and supports also languages, which are read from right to left.

Multilizer is safe to use; Multizer doesn´t alter the original files and builds the localized files preserving the original file format and structure.
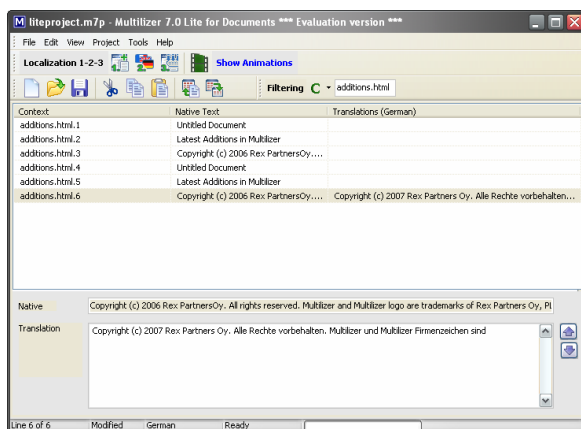

Multilizer 2007 Lite is an easy product to use. You can save time and money and make it all so professionally and fast.

Multilizer 2007 Lite for Developers

This tool is used for localizing software that is developed with the most common software development tools. It localizes standard Windows binaries (.exe, .ocx, .dll, ...), VCL binaries (executables compiled with Delphi or C++Builder), Visual Studio .NET solutions and projects, and .resx files. Maximum flexibility is available to Delphi and C++ Builder user by Multilizer Localization components that are also included in this product.

Multilizer 2007 Lite for Documents

Multilizer 2007 Lite for Documents is an easy-to-use tool for localizing documents in the most common document formats. It localizes typical text documents, such as HTML (.html, .htm, .php, .asp, etc.) including embedded scripts (JScript for example), XML (.xml, .svg, and all others), and any other text files by using regular expressions.

EASY TO USE - Localization 1-2-3

Multilizer 2007 Lite is extremely easy, fast and simple to use; complete just 3 simple steps to make your software/content localized or multilingual. Localization 1 – 2 – 3 toolbar for beginners and it's all done and ready.

1. **Create** a Localization Project and specify the file(s) to localize.
2. **Translate** the strings of the project to selected language(s).
3. **Build** localized files.

Multilizer 2007 Lite products are full of features that make the localization as easy as can be!
- **Localization 1-2-3** toolbar for beginners.
- Easy-to-use **Translation Window** for easy editing of short and long translations.
- **In-place editor** in translation grid for quick additions.
- Powerful -- yet simple -- text filter to quickly view just a part of translations.
- and a lot more...
